Art & Stewardship: The Role of Creative Industries in Promoting Climate Action to Protect Global Culture

For 73 years, The Venice Film Festival has been a premiere international focal point of cinema and culture. Yet, since its inception, human impact on the environment has increasingly threatened the very existence of world heritage sites such as historic Venice itself. Environmentalists, artists and industry representatives will convene to discuss the role and stewardship of creative industries and the filmmaking community in inspiring climate action to protect global culture.

PANEL DISCUSSION
